

Exploration of education system	
Sint Maarten	
Theme G: Education	
Reasons for the project	At the request of the Ministry of Education, Culture and Science, the Dutch Inspectorate of Education supports Sint Maarten with an audit of the entire education system. The background to this question is formed by the agreements in the Country package.
Project objectives	Conduct a screening to describe the current state of affairs and the development of the education system in Sint Maarten.
Scope	Exploration of education system
Chosen approach	This exploration takes the form of a baseline measurement and describes the development and the current state of affairs of the education system in Sint Maarten. The education system is understood to mean the totality (system level) of organisations with the associated regulations, measures and instruments, including the institutionalised education system.
Intended results	Based on the results of the exploration, concrete system recommendations are made to improve the effectiveness and efficiency of education. To this end, together with Sint Maarten a supported and context-rich quality image will be created of the state of affairs regarding the three core tasks of education: allocation, socialisation, qualification and the quality of facilities within which these core tasks are given shape.
Preconditions, coherence and dependencies	Not in particular.
